

Airfield Refuelling Installation Inspections

Is your refuelling system fully compliant with the Oil Storage Regulations and JIG 4 Guidance?

We offer comprehensive inspection services tailored to the aviation industry - ensuring your airfield refuelling system meets the highest safety, environmental, and operational standards, which should be carried out annually.

Inspection Services

- Site audit to JIG 4 guidance and the Oil Storage Regulations
- Fuel tank inspections.
- Fuel pump service and calibrations.
- Secondary containment/bunding verification.
- Checks on hoses, pipework, taps, valves and anti-syphon prevention.
- Review of overfill prevention and venting.
- Recommendations for practical remedial actions to meet current standards.
- Audit report paperwork and pump calibration certificates

Optional Extras

- Hazardous area electrical inspections (ATEX/Compex electrician).
- Underground tank and pipework pressure testing.
- Filter replacement.
- Fuel sampling and lab analysis

Why Chose Octane?

- Extensive knowledge of the Oil Storage Regulations and JIG 4 Guidance.
- Airside insured.
- Fast turnaround and UK-wide availability.
- Minimal disruption to fuelling operations during assessment.
